The Vehicle Mounted Emergency Spill Defence System

Sadly, as you will know from listening to the traffic reports, vehicle spills are a daily occurrence on our roads. Worryingly you may well find that the standard vehicle spill kit is woefully inadequate for anything more than a minor spill. That's why every vehicle in your fleet should carry an EIL Vehicle Mounted Emergency Flood and Spill Defence System.

It's solid all-weather construction ensures that it can be securely bolted to any vehicle. The canister contains the extendable Telestopper™, foot-pump and bladder, with ample additional room for Personal Protective Equipment. You can also choose the additional tyre operated pump, which 'borrows' 5psi from your vehicles tyre to quickly inflate the bladder to any drain size up to 18 inches.

The system can work in tandem with your standard spill-kit, but offers greater flexibility and because the system works *with* the roadside drainage system, it will buy the vehicle operator valuable time to call for help if a spill occurs.

This is a system that isn't just there to tick the Health and Safety compliance box, it works!

IT'S AS SIMPLE AS

STEP ONE

IF AN ACCIDENT SHOULD TAKE PLACE YOU MAY FIND THAT THE STANDARD SPILL KIT IS WOEFULLY INADEQUATE FOR ANYTHING MORE THAN A MINOR SPILL.

STEP TWO

DON'T PANIC! CALL THE EMERGENCY SERVICES. PUT ON YOUR PROTECTIVE SAFETY EQUIPMENT. LIFT THE DRAIN OR MANHOLE COVER NEAREST TO THE SPILL. INSERT THE TELESTOPPER™ FIRMLY INTO THE PIPE, BLOCKING THE DIRECTION OF THE FLOW.

STEP THREE

USE THE NEAREST VEHICLE TYRE TO INFLATE THE BLADDER USING THE TELESTOPPER™ INFLATION HOSE.

STEP FOUR

REPLACE THE DRAIN OR MANHOLE COVER, PLACE A WARNING TRIANGLE OR HAZARD WARNING BARRIER AROUND THE AREA. RETIRE TO A SAFE DISTANCE AND AWAIT THE EMERGENCY SERVICES.
